# **WEATHER OF CONCERN**

## **Weather of Concern**

- NWS has reported that there is an increased flash flood risk associated with the Marina Fire burn near Lee Vining, Mono County. The steep terrain can rock slide on a sunny day.
- If NWS begin to see storm cells with rain they are going to be very quick to issue Flash Flood Warnings for the burn area and Hwy 395.
- It may only take 5-10 minutes of moderate/heavy rain for debris flows and rock slides to develop
- Most of the storms we'd see the next few days should be high-based drier storms (strong winds, lightning) but there is a 10-20% chance of storms with wetting rains impacting the burn site.

[http://www.wrh.noaa.gov/sto/brief/www\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php)

## **WEATHER SYNOPSIS BY REGION**

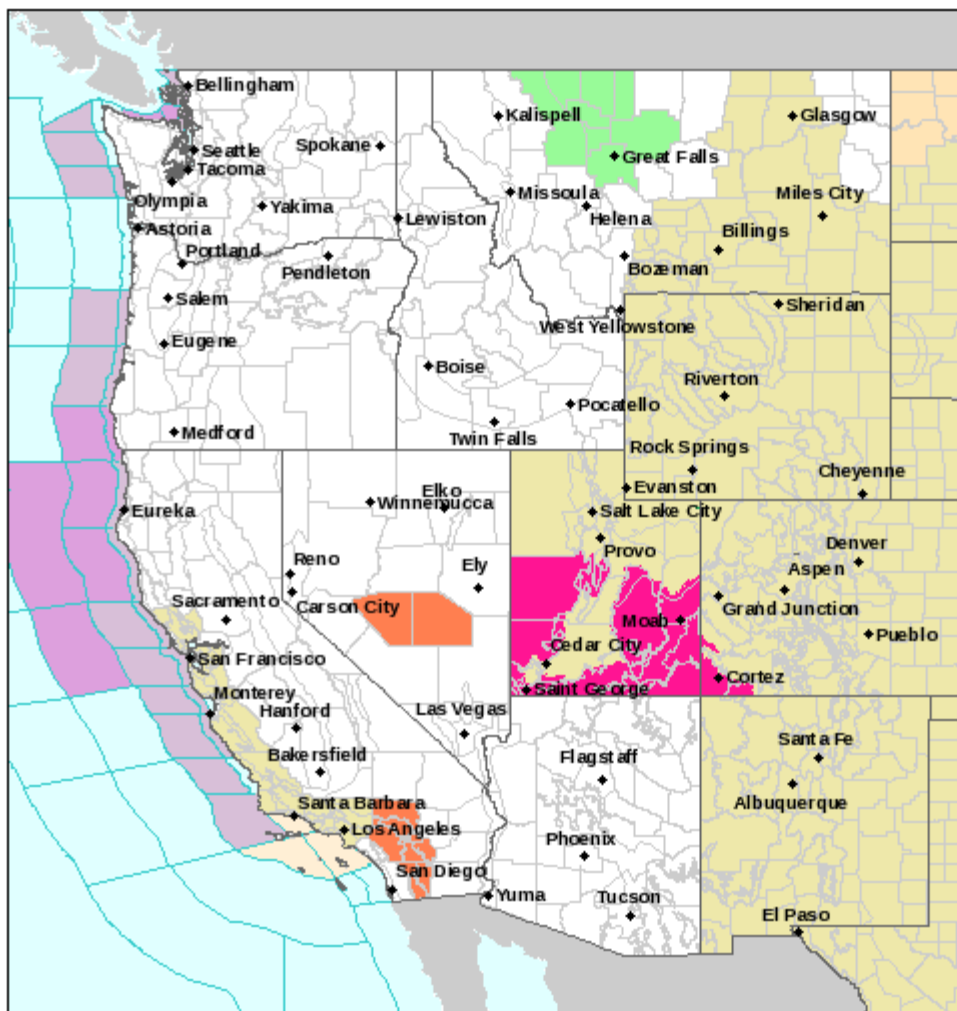

### **NORTHERN CALIFORNIA**

Strong high pressure over the Great Basin will continue the warming trend in Northern California through Wednesday. Inland temperatures will be around 10 degrees above normal and humidity will drop to 5-15% each afternoon. Diurnal slope winds will prevail in inland areas - downslope during nights and mornings and upslope in afternoons. These winds will reach 5-10 mph with gusts to 20-25 mph in wind-prone areas. Overnight humidity recovery will also be poor in many inland areas (to less than 40%). A shallow marine layer will keep areas near the immediate coast mild and afternoon sea breeze winds can be expected in the usual places. Late on Wednesday the high will begin to weaken as a low pressure trough begins to deepen offshore. Temperatures will cool a few degrees each day through next weekend as the trough continues to deepen. Afternoon cumulus buildups can be expected over the higher peaks each day, especially in the north and east. Shower and thunderstorm chances within Northern California are very low through Friday, but will increase to about 10-20% Saturday through Monday near the Oregon state line. Afternoon southwest winds east of the Cascade-Sierra crest will increase to 10-17 mph with gusts to 25-30 mph Thursday and Friday, then increase each day through Monday when they will reach 10-20 with gusts to 35-40 mph. Higher humidity is expected to accompany these east side winds.

### **SOUTHERN CALIFORNIA**

A disturbance in the easterly flow around strong high pressure centered over Utah will bring isolated afternoon thunderstorms to the mountains and deserts of Southern California east of the I-15 corridor today. An isolated afternoon thunderstorm will be possible over the Sierra Tuesday as the disturbance moves northeast into Nevada. The high pressure area will maintain well above normal temperatures away from the coastal areas through Wednesday, with mid 80s to mid 90s across the mountains and mid 90s to 108 in the valleys. A cooling trend will occur Thursday through this weekend as the high pressure moves to Texas and a weak trough moves over the West Coast. Temperatures will be near normal this weekend. Widespread minimum humidity in the single digits and teens along with poor nighttime humidity will occur above and inland from the marine layer through this weekend. The marine layer depth will be around 2,000 feet deep by this weekend. South to west afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes Friday through this weekend.
